

Centricity® Practice Solution

for Ophthalmic Professionals

Centricity® Practice Solution is a fully integrated electronic medical record and practice management system designed to leverage practice performance and improve patient care standards.

Centricity is engineered with technology that enhances the clinical and financial productivity of your ambulatory practice, while helping you respond to today's healthcare challenges.

We have expanded functionality through integrated customizations special to your needs. Our all-in-one solution for the ophthalmic professional helps you advance patient care experience with improved practice efficiency that leverages your performance.

The functionality within our product offering allows practices the luxury of using a total and complete solution to enhance workflow efficiency and performance.

Ophthalmology Clinical Content

Specific forms within the EMR, relating to the ophthalmology specialty, contain ophthalmic terms for clinicians to utilize during the patient encounter.

VisualNote

Incorporated into the base clinical content package is our annotation tool. Clinicians will be able to draw or add text directly on pre-defined templates with easy to use tools. The completed diagrams can be saved to the EMR chart with a single click of the mouse.

CentriView

This application is an additional tool that providers can utilize when reviewing images. *CentriView* lends convenience to healthcare providers as multiple images within the patient's electronic chart, taken

by different ophthalmic devices are all placed into one form.

Image Interface

This utility allows easy acquisition of images and documents as EMR attachments. The interface makes it simple to pre-define multiple locations where different devices will store their images, whether on a server, a workstation in the exam room, or on a shared folder on the device itself.

Optical Manager

This module links to the billing component of *Centricity* and efficiently manages tasks between the medical office and the optical dispensary, saving practices time and money. Our standard reports allow your office to easily track sales productivity and secure inventory control. ♦
