

# Patient Portal

Enhancing patient-to-physician engagement. Patient Portals are secure online communication tools that provide greater workflow efficiencies, while increasing patient satisfaction.

## Benefits to Patient Portals:

- ◆ Reduce time and cost
- ◆ Increase patient engagement and satisfaction
- ◆ Exchange messages with referring physicians, clinical staff or patients promptly & securely
- ◆ Meet regulatory compliance

Interact with your patients via the Web, 24/7. The functionality of a Patient Portal lends convenience and meets the demands of both physician practices and patients alike. Our portal solution integrates with Centricity™ PM and EHR and is certified to meet regulatory objectives, keeping your practice in accordance with healthcare standards.

### Save Time and Cost

Streamline your routine time-consuming, non-critical tasks. Automate manual processes that will save your staff time. Reduce operating costs associated with phone calls, faxes, direct mail, postage and more. Your front and back office staff can spend less time on unnecessary procedures and focus more time on patient wellness.

### Enhance Patient Satisfaction

Interact directly with patients anytime. Within a few clicks, patient registration, appointment scheduling, information requests and bill pay is accessed and processed securely online.

Patients are less frustrated because they no longer have to wait long periods of time to receive assistance or responses through standard, conventional methods. Their needs are serviced online in a matter of a few minutes.

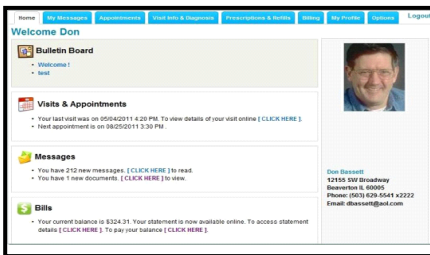

### Secure Messaging

The portal is a secure and HIPAA compliant channel. Physicians can communicate and disclose information with clinical staff, referring physicians or patients in an effective and timely manner.

### Meet Regulatory Compliance

Certified for today's industry standards, the patient portal solution supports and manages Meaningful Use (MU).

Today, a portal is mandatory to help Eligible Providers meet certain MU measures and qualify for incentive funding. They also provide patients a direct and more active role in their health by granting them real-time access to specific data contained in their electronic record. ◆
