

# Visual Form Editor

Visual Form Editor (VFE) is a tool used to design patient encounter forms that integrates seamlessly with the Centricity™ EMR.

## Key Features

- ◆ Visual Design (WYSIWYG)
- ◆ Drag & Drop Functionality
- ◆ Dynamic Resizing of Items
- ◆ Temporary Variable Naming
- ◆ Copy & Paste Functionality
- ◆ Multiple Document Interface
- ◆ Split View
- ◆ Container / Server Translation Functionality
- ◆ Control Improvements

VFE enables you to concentrate on creating quality forms rather than overcoming design considerations. This application will reduce the time and costs associated with developing and modifying forms.

What you See is What you Get (WYSIWYG) Editor speeds the development of encounter forms, eliminating the need to preview or load forms to view visual display. Overlapping visibility regions can also be viewed.

Drag and Drop allows for the rapid development and modification of encounter forms. Moving single components or groups of components becomes the easy task of dragging and dropping them in position. The Visual Form Editor will recalculate the exact positions where the objects will be placed when displayed in Centricity EMR.

Multiple Document Interface facilitates design of several forms simultaneously. This feature also simplifies the sharing of components between forms.

Split View permits form design and MEL code development in the same window.

Control Improvements have been developed which allow for greater control of form display and translation.

Virtual OfficeWare Healthcare Solutions offers VFE training sessions. Learn how to create basic forms or make basic modifications through our VFE class. Here is your opportunity to develop and customize clinical content based on your practice needs. ◆
